SUMMARY

Senior Software Engineer with 4.5+ years of experience designing and scaling distributed systems, real-time data platforms, and AI-driven applications across finance and healthcare domains. Expertise in building high-throughput microservices and event-driven architectures using Java, Spring Boot, Kafka, Kubernetes, and AWS. Strong foundation in system design, distributed computing, and data structures, with hands-on experience integrating LLM-based solutions and RAG pipelines to automate complex workflows and enhance decision-making. Proven ability to own end-to-end systems from architecture and development to deployment, with a focus on scalability, performance, and reliability.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL
Frontend: Angular (10+), React.js, Next.js, Redux, Bootstrap 5, jQuery (legacy systems)
Backend: Node.js, Django, J2EE, Spring Boot
Web Technologies: HTML5, CSS3, Tailwind CSS, AJAX, JSON, XML
Cloud & Platforms: AWS (CloudFront, S3, Lambda, API Gateway, Amplify), GCP (Firebase, Cloud Functions, Storage)
Databases: MongoDB, PostgreSQL, Firebase Realtime DB, DynamoDB, MySQL
Streaming & Messaging: Apache Kafka, RabbitMQ
DevOps & Tools: Docker, Kubernetes, Jenkins, GitHub Actions, Git, Postman, JIRA, Figma
Testing: Jest, Cypress, Enzyme, Lighthouse, JUnit, Mockito
AI & Generative AI: OpenAI APIs, GPT, RAG pipelines, Prompt Engineering, Claude API, Claude Code, Anthropic SDK
Methodologies: Agile/Scrum, SDLC, Waterfall

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | Senior Software Engineer | INDIA **Jun 2023 – Jun 2024**

- Designed and owned a high-throughput distributed platform using Spring Boot, Node.js, and React.js to aggregate real-time financial data from multiple sources, enabling low-latency dashboards used by 1,000+ global analysts.
- Architected and led an event-driven microservices platform using Docker, Kubernetes, Apache Kafka, and RabbitMQ, implementing parallel processing and fault-tolerant workflows to automate settlement reconciliation, reducing processing time to under 40 minutes per batch.
- Designed and scaled 100+ RESTful and GraphQL APIs secured with OAuth2, enabling seamless integration between internal banking systems and external providers, handling 300,000+ API calls daily with high availability and resilience.
- Implemented unified observability by centralizing application and infrastructure metrics via CloudWatch and integrating Prometheus and Grafana dashboards, reducing incident resolution time to under 15 minutes and improving system reliability.
- Led CI/CD and release engineering strategy using Git, Docker, Kubernetes, and automated testing frameworks, enabling zero-downtime deployments, rollback strategies, and highly reliable release cycles.
- Designed and optimized large-scale search infrastructure using Elasticsearch within Spring Boot services, indexing over 6 million trade records and enabling low-latency queries supporting 70,000+ searches with sub-second response times.
- Integrated LLM-based systems using OpenAI APIs and RAG pipelines to build context-aware trade summarization and intelligent reporting systems, reducing manual effort by 40% and accelerating decision-making workflows.
- Mentored engineers and led engineering best practices, conducting design reviews, improving code quality, and authoring architecture and API documentation to enhance maintainability and cross-team collaboration.

Capgemini Technology Services India Ltd. | Software Engineer | INDIA **Mar 2022 – Jun 2023**

- Designed and delivered scalable frontend architecture using Angular (10+) and TypeScript for healthcare workflows, improving usability, accessibility, and reliability of clinician-facing applications handling critical data.
- Built and owned secure backend services and APIs using Node.js and Express, enabling concurrent access to healthcare data systems and external integrations, handling 10,000+ requests with high availability and stability.
- Implemented automated data workflows and AI-driven summarization systems using cron jobs and OpenAI APIs, enabling efficient processing of large-scale datasets and improving reporting accuracy across operational systems.
- Developed high-performance UI components using React.js and Redux, applying lazy loading, memoization, and performance optimization techniques to significantly improve page load times and user interaction.
- Led frontend modernization and design standardization initiative by migrating legacy CSS systems to Tailwind CSS, improving scalability, consistency, and maintainability across 5+ applications.
- Optimized backend performance and database efficiency through indexing, caching, and query optimization strategies, reducing infrastructure costs by 20% while improving response times.
- Established cloud-native deployment pipelines using Docker and Terraform, enabling automated infrastructure provisioning, reliable deployments, and improved system uptime while maintaining compliance with enterprise standards.

Zensar Technologies | Software Engineer Intern | INDIA **Aug 2020 – Mar 2022**

- Refactored and optimized backend services and data models using Node.js and MongoDB for financial transaction systems, improving data consistency, throughput, and synchronization across distributed systems.
- Enhanced system scalability and performance for a financial reporting platform handling 200,000+ daily transactions, implementing caching strategies, optimized queries, and robust error handling.
- Migrated legacy frontend systems from AngularJS to Angular (6+), improving responsiveness, maintainability, and usability for 5,000+ users across reporting and portfolio applications.
- Designed and implemented API testing frameworks using Postman, integrating automated testing into CI pipelines to improve release quality and reduce deployment defects.
- Automated operational workflows using Python and Bash scripting for log management, audit reporting, and monitoring, reducing manual effort by 60+ hours per month.
- Designed scalable data pipelines using Apache Kafka for real-time batch processing, improving data availability and analytics performance.
- Contributed to Agile development processes, including sprint planning, backlog refinement, and retrospectives, improving delivery efficiency and team collaboration.

EDUCATION

Master of Science in Software Engineering | Arizona State University, USA **May 2026**
Bachelor of Engineering in Information Technology | Pune University, INDIA **May 2022**
